Synopsis

Both a study guide and a clinical resource, this manual offers oncology advanced practice nurses a comprehensive review in preparation for advanced oncology certification tests and a valuable reference guide that can be used in everyday practice. Each chapter in this second edition addresses a topic important to advanced oncology nursing. Key points reinforce each concept, and a case study raises relevant questions. Content correlates to the weight the Oncology Nursing Certification Corporation (ONCC) has assigned to specific topics on the certification examination and is representative of the ONCC blueprints for the advanced oncology nursing certification tests. In addition, practice test questions are offered in the final chapter in the same format as the ONCC advanced practice certification exams. The manual's editors have served as faculty for the advanced oncology nursing certification review online course as well as an in-person course at ONS national conferences. Yet the manual is more than just a study guide for test preparation. Using the most current clinical evidence and literature available at the time of publication, the topics presented have been expanded and represent a valuable resource for oncology advanced practice nurses, graduate nursing students, oncology nurses in clinical practice, and other healthcare professionals.

Book Information
