Low-Molecular-Weight Heparins In Prophylaxis And Therapy Of Thromboembolic Diseases (Fundamental And Clinical Cardiology)

Synopsis

Detailing the basic and clinical science of low-molecular-weight heparins, this reference assesses the efficacy and safety of using this new class of antithrombotic agents in the prevention and treatment of venous thromboembolism, explaining the advantages of low-molecular-weight heparins, as compared with regular, unfractionated heparins. Containing the contributions of over 25 specialists from Europe and North America, "Low-Molecular-Weight Heparins in prophylaxis and Therapy of Thromboembolic Diseases": investigates the pharmacology, mechanisms of action, and laboratory monitoring of low-molecular-weight heparins; offers a first appraisal of the use of low-molecular-weight heparins in the treatment of established venous thromboembolism; presents systematic overviews of the use of low-molecular-weight heparins in the prevention of venous thromboembolism following general, neuro-, and orthopedic surgery, and in immobilized medical patients, as well as in extracorporeal circuits; and delineates the interactions of low-molecular-weight heparin compounds with endothelial cells, blood platelets, the fibrinolytic system, and the proliferation of smooth muscle tissue. This resource is intended for: cardiologists; specialists in vascular medicine; hematologists; vascular, cardiovascular, and orthopedic surgeons; anesthesiologists; clinical pharmacologists; pulmonologists; gynecologists; and upper-level undergraduate, graduate, and medical school students in these disciplines.

Book Information

Series: Fundamental and Clinical Cardiology (Book 19)

Hardcover: 323 pages

Publisher: Marcel Dekker Inc; 1 edition (January 1994)

Language: English

ISBN-10: 0824791746

ISBN-13: 978-0824791742

Product Dimensions: 0.8 x 6.5 x 9.5 inches

Shipping Weight: 1.4 pounds (View shipping rates and policies)
