# Disaster Preparedness For EMP Attacks And Solar Storms (Expanded Edition)

## Synopsis

See Dr. Bradley's exciting post-apocalyptic novel - The Survivalist (Frontier Justice)--just released, available in print and on Kindle. What would happen if terrorists detonated a nuclear device high above the United States? What about if the Sun emitted a large coronal mass ejection that resulted in a damaging geomagnetic storm? In either case, electrical power could be lost for months. Shortages would quickly ensue—food, water, and fuel would disappear within days. Widespread panic and suffering would be unavoidable. Are you prepared for these large-scale disasters? This book will help you to prepare for two end-of-the-world-as-we-know-it (TEOTWAWKI) events: the EMP attack and the solar storm. Each threat is carefully studied with analyses of its likelihood and potential impacts on our nation's critical infrastructures. Practical preparations are outlined, including steps to meet the fourteen basic needs in the absence of modern utilities, and the use of Faraday cages and uninterruptible power supplies to protect personal electronics. Several techniques for constructing ad-hoc Faraday cages are presented. The shielding effectiveness of homemade Faraday cages is measured and compared, including metal garbage cans, foil-wrapped boxes, fire safes, anti-static bags, ammo cans, microwave ovens, and full-sized protective rooms. The Expanded Edition includes 25 additional pages with discussions of how to establish your own micro-infrastructures, such as food, water, and electricity. Also, the susceptibility and protection of personal automobiles is presented. To sign up for Dr. Bradley's free Practical Prepper Newsletter, see <http://disasterpreparer.com>.

## Book Information

Paperback: 128 pages

Publisher: CreateSpace Independent Publishing Platform; Expanded edition (August 19, 2012)

Language: English

ISBN-10: 1478376651

ISBN-13: 978-1478376651

Product Dimensions: 6 x 0.3 x 9 inches

Shipping Weight: 8.8 ounces (View shipping rates and policies)

Average Customer Review: 4.4 out of 5 stars— See all reviews— (195 customer reviews)

Best Sellers Rank: #15,210 in Books (See Top 100 in Books) #36 in Books > Reference >

Survival & Emergency Preparedness

## Customer Reviews

When I was very young my Dad took me through the plant he worked at. On that tour he showed

me a Faraday cage. It was a room made of copper screen. I was like a cat with a new box; they could not get me out of it. Later I became an Amateur radio operator; I have been a shelter communicator in Florida. I have seen the government, even the National Guard relying on Hams to communicate because their equipment did not function or function well. It happened during recovery in Hurricane Andrew. The ARRL Radio operators Manual talks about EMP and what to do. They wanted us to fire up our old tube radios as they would most likely work. I was more concerned about my hair falling out, as they made it sound like it was the usual emergency. While reading the few paragraphs I remembered the Faraday Cage at Dad's Work. Every now and then I looked for information on the Faraday Cage to protect my radio equipment, worry about the hair latter. I could find very little much of it conflicting, some just plain nonsense. Lately I was looking again for this information. There is a lot of talk about EMP (it is the most logical first strike) from a lot of people, most really don't know what they are talking about. Some information is akin to the CBer myth that you can protect your self from lighting hitting your antennae by putting the end of the Coax in a glass Mayonnaise jar.... yea right. So who do you ask? The Survivalist or the NASA engineer (PhD no less) who's job it is to research EMP? Personally I'd ask the Engineer for NASA, I'd look to the survivalist to show me how to snare a rabbit with my shoe string. This book is to help your electronics survive 2 possibly devastating events.
